PROFESSIONAL SUMMARY

Software Engineer with nearly 8 years of experience specializing in backend development. Graduate in Software Engineering from the Federal University of Amazonas, with a professional trajectory ranging from maintaining legacy monolithic systems to building robust microservices-based architectures. Extensive experience in high-scale distributed systems, digital retail, and cloud computing, focused on delivering scalable, efficient, and resilient solutions aligned with business needs. Experience leveraging generative AI tools (GPT, Claude, Gemini, GitHub Copilot) within the development workflow to improve productivity, code quality, and delivery speed.

TECHNICAL SKILLS

Languages	Java, TypeScript/JavaScript, Python, SQL
Frameworks	Spring Boot, Node.js, Nest.js, Angular, ExtJs
Databases	MySQL, MongoDB, Oracle, Redis, AWS DynamoDB
Cloud & DevOps	AWS (EKS, EC2, ECS, ECR), GCP, Kubernetes, Docker, ArgoCD
Messaging	Apache Kafka, RabbitMQ, AWS Kinesis, GCP PubSub, Apache Storm
Search & Analytics	Elasticsearch, Apache Solr
Authentication	Keycloak, OAuth2, JWT, Spring Security
Testing	JUnit, Mockito, Jest
AI	GPT, Claude, Gemini, GitHub Copilot, Whisper
Tools	GitHub Actions, GitLab CI/CD, Grafana, Librato, OCR (Tesseract)

PROFESSIONAL EXPERIENCE

TQI <i>Senior Back-End Developer</i>	October 2025 - Present <i>Remote</i>
- Acted as a Senior Backend Developer in a consulting environment, allocated to a financial institution - Worked on the product recharge team, developing and maintaining high-throughput transactional services - Designed and implemented microservices using Java and Node.js, focusing on scalability and low latency - Implemented asynchronous event-driven communication using Apache Kafka - Used Redis for caching strategies, reducing response times and improving system performance - Contributed to architectural decisions ensuring high availability, resilience, and fault tolerance in distributed systems - Leveraged GitHub Copilot to increase productivity and support code and test development	
Foursales <i>Senior Back-End Developer</i>	May 2025 - October 2025 <i>Remote</i>
- Development and maintenance of backend services in Java 17 with Spring Boot, creating high-performance and scalable RESTful APIs - Implementation of APIs that consume and publish asynchronous events via Apache Kafka, ensuring efficient and resilient communication between microservices - Optimization of search functionalities using Elasticsearch, enabling fast queries over large-scale datasets - Integration with MySQL, ensuring transactional consistency and high performance - Implementation of authentication and access control using Keycloak with OAuth2 and JWT - Application of Spring Security to enhance API protection and system security - Development of AI-based solutions to consume, process, and analyze real-time data streams - Implemented audio-based features using Whisper (speech-to-text) integrated with GPT, accelerating feature delivery and debugging workflows - Creation of automated tests with JUnit and Mockito, improving reliability and maintainability - Collaboration with frontend, product, and QA teams to ensure continuous delivery and high-quality releases	

Instituto Amazon Inovare*Backend Developer PL*

January 2025 - June 2025

Manaus, Amazonas, Brazil

- Development of large-scale file management software with intelligent search using OCR (Tesseract) and Elastic-search
- API development in Node.js with TypeScript and Nest.js, handling high-volume document processing
- Built the complete CI/CD pipeline using GitHub Actions, ArgoCD, and Kubernetes on AWS (EKS and EC2)
- Established a scalable and highly available DevOps environment, improving deployment reliability
- Significantly reduced deployment time and eliminated common release issues through automation
- Delivered internal training sessions on DevOps tools, enabling team autonomy and knowledge sharing
- Used Claude/Claude Code for code analysis, debugging, and development acceleration

Americanas s.a.*Backend Developer PL*

October 2022 - December 2024

Remote

- Development, migration, and maintenance of search and autocomplete architecture at scale
- Execution of large-scale database migrations focused on cost optimization
- Development of Java microservices using Spring framework
- Implementation of messaging systems using GCP Pub/Sub, AWS Kinesis, and Apache Storm
- Management of MongoDB databases in distributed environments
- Maintenance and migration of Apache Solr to Elasticsearch
- Frontend development using Angular 12
- Deployment via GitLab CI/CD to Kubernetes on AWS and GCP

Linx*FullStack Developer*

January 2021 - October 2022

Manaus, Amazonas, Brazil

- Development and maintenance of B2B SaaS for e-commerce storefront management
- Development of Node.js microservices using JavaScript and TypeScript
- Implementation of monitoring using Grafana
- Use of Apache Kafka for asynchronous messaging
- Management of MongoDB and AWS DynamoDB databases
- Implementation of Redis caching strategies
- Frontend development using Angular 2
- Deployment using GitHub CI/CD with AWS ECR and ECS

iTRIAD Research and Development*Junior FullStack Developer*

November 2019 - January 2021

Manaus, Amazonas, Brazil

- Development and maintenance of financial and management systems for Yamaha
- Backend development using Java 8 and Spring Boot
- Frontend development using ExtJs
- Work with Oracle databases
- Development of automation and web scraping services using Node.js and RabbitMQ

FUCAPI*Fullstack Developer*

February 2016 - February 2017

Manacapuru, Amazonas, Brazil

- Fullstack developer in the SOFT-AM initiative, working on web and mobile solutions for education
- Participation from initial planning to final delivery
- Collaboration in feature development and problem solving
- Ensuring best practices for maintainable and efficient code

EDUCATION**Federal University of Amazonas**

Bachelor's Degree in Software Engineering

January 2018 - December 2023

Complete education focused on systems development, software architecture, agile methodologies, and software engineering best practices.
